

The Dreampod Home Float Series

The finest in-home float tanks in the world.

The Home Float was designed for the person wanting to float everyday in the comfort of their own home. We took our best selling commercial pod, stripped it down, and streamlined it so it was affordable for the average person.

We're excited to offer 3 different options when it comes to our Home Float Series.

- The Standard Home Float Pro
- The Home Float Flex (available in two different sizes)
- The Home Float Plus

Home Float Pro

Home Float Flex

Home Float Plus

Features of the Dreampod Home Float Series

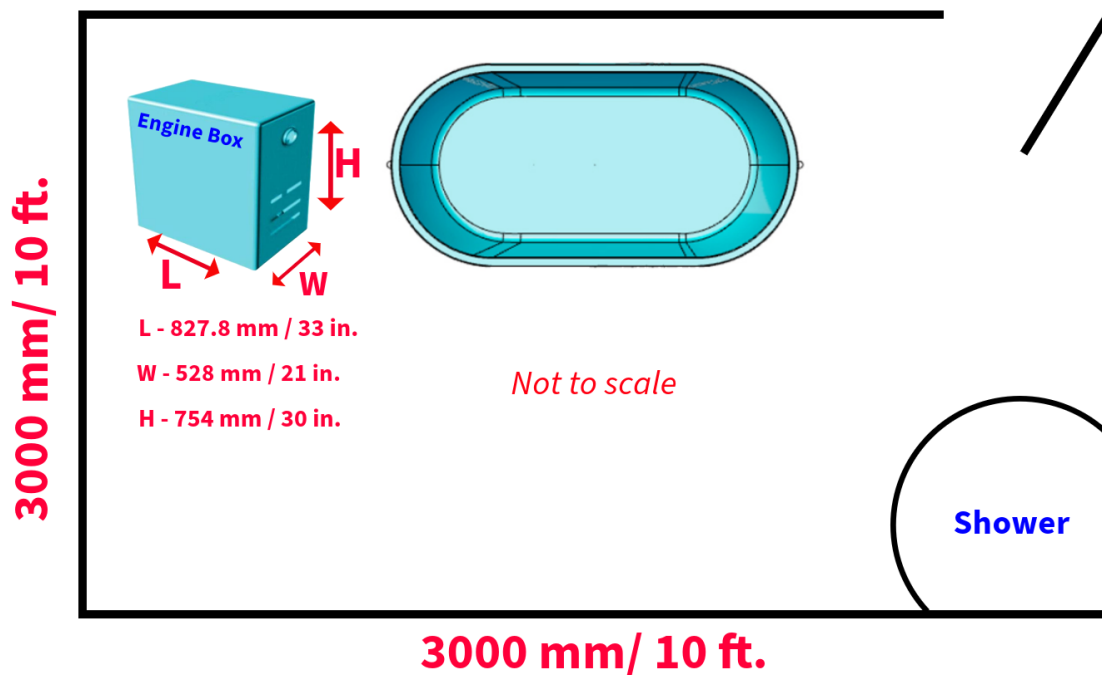

- *Easy to use wired control panel for day to day use*
- *A UV light integrated into the filtration system*
- *An accurate, single-dosing, chemical dispenser*
- *A high efficiency in-line heater*
- *A magnetic driven centrifugal pump*
- *A 10 micron filter*
- *A soothing LED light inside the tank (only on the Pro & Plus models)*

Recommendations for room design and requirements for operations

Part of our focus in designing the Home Float was creating a float tank that could easily fit inside any home or living space. We created the Home Float Pro to fit through any standard doorway and comfortably inside any room that is at least **3000 mm x 3000 mm / 10 ft. x 10 ft.**

This is the recommended room size for each model.

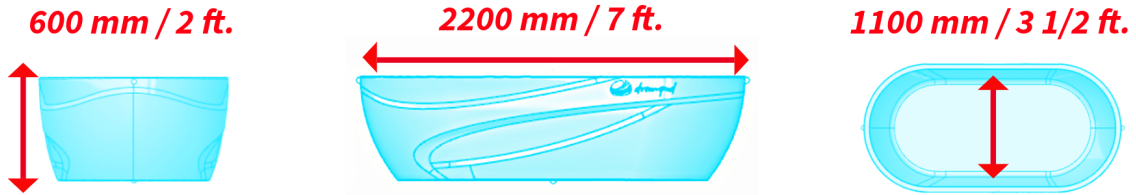

It's important the room or space where you are placing the Home Float Pro is somewhat prepared as a wet environment. We recommend some type of non-slip flooring and, if able, waterproof paints or tiling for the walls. Having a shower in the same room as the Home Float is ideal and will allow you to rinse off after your float.

The ideal ambient temperature for the room is anywhere between 26° to 28° C / 78° to 82° F. We also recommend some form of air circulation. A simple bathroom exhaust fan works.

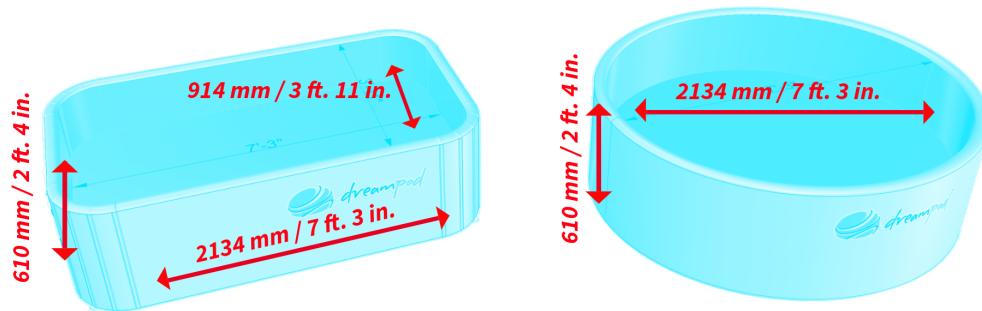

Dimensions for each Home Float Model

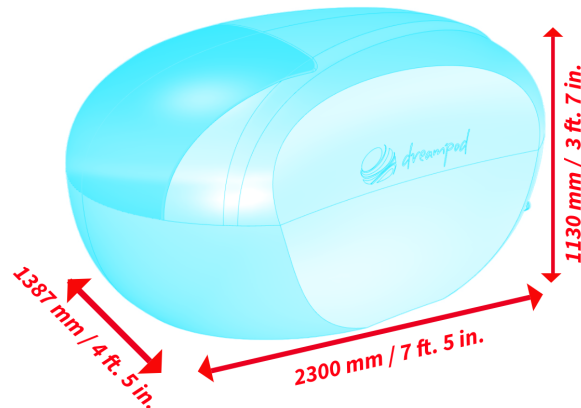

The Standard Home Float Pro

The Home Float Flex

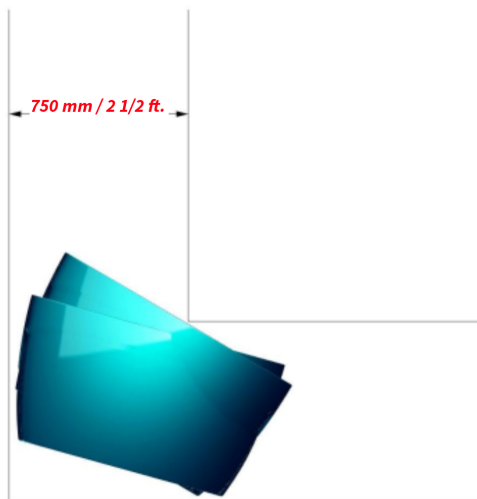

The Home Float Plus

Below are the power requirements for the Home Float series based on location. All locations require a single phase power supply and we recommend the outlet be set up on its own individual waterproof spur residential breaker.

<u>North America</u>	<u>Australia/New Zealand</u>	<u>Asia/Europe</u>	<u>East Japan</u>	<u>West Japan</u>
110 Volt/60 hz 15 amps	240 Volt/50 hz 10 amps	220 Volt/50 hz 10 amps	100 Volt/50 hz 10 amps	100 Volt/60 hz 10 amps

The Home Float Pro will easily maneuver through hallways and corridors. The minimum width requirement for a 90 ° turn is only **750 mm / 2 ½ ft.**

We hope you enjoy floating in the Dreampod Home Float pods. We look forward to hearing all about it. Please reach out to our team anytime via support@dream-pod.com
